1987 MANITOBA ECONOMIC PERFORMANCE
JUNE 10, 1988

Manitoba's Gross Domestic Product (GDP), the value of goods and services produced in the province, rose 6.5 percent to a level of $20.3 billion in 1987, according to preliminary figures released by the Manitoba Bureau of Statistics. After allowing for price increases, this represented a gain of 3.1 percent in real GDP. Higher export demand was the primary source of growth in 1987.

In real terms, domestic demand (personal, government and investment expenditures) grew only 0.8 percent in 1987. This was the result of only marginal growth of 2.1 and 1.3 percent in government expenditures and personal expenditure respectively and a decline in real investment of 2.1 percent. Strong export growth of 7.4 percent, with no increase in the level of imports, resulted in the merchandise trade balance being the major impetus for the 3.1 percent real growth in GDP. Deflation in the value of exports, primarily the result of falling grain prices, did not allow the rise in the volume of exports to have a similar impact on Manitoba's nominal GDP rate of growth in 1987.

In nominal terms, GDP rose by 6.5 percent. The components of income which were the major contributors to growth were subsidies (primarily agricultural subsidies) which rose 52.9 percent, corporate profits which grew by 15.9 percent, and unincorporated business income which increased by 10.1 percent. The components of demand which were the major contributors to growth were exports, which rose 8.4 percent, personal expenditures which grew 5.6 percent, and government current expenditure which increased 5.5 percent.

On an industry basis, growth was led by the goods producing industries which, led by a recovery in the agriculture and mining industries (both of which declined in 1986), grew by 9.6 percent. Commercial services and non-commercial service industries rose by 7.3 and 6.4 percent respectively.

Personal Income rose by 7.4 percent to a level of $18.1 billion. Personal Disposable Income (after taxes are deducted) increased by 6.8 percent. After allowing for the increase in consumer prices (as measured by the CPI) this represented a growth in consumer purchasing power in Personal Income and Personal Disposable Income of 3.1 and 2.5 percent respectively.

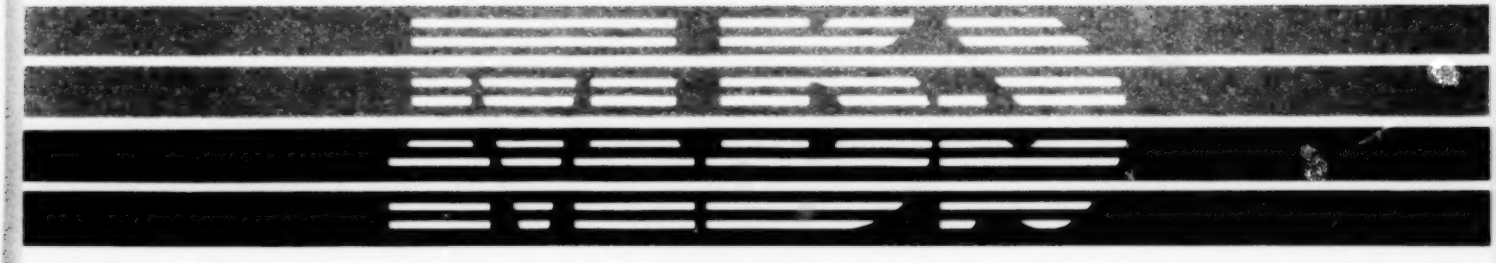
DETAILED REPORT

Manitoba
Bureau of
Statistics



JUNE 16, 1988

1987 MANITOBA ECONOMIC PERFORMANCE
JUNE 10, 1988

Manitoba's Gross Domestic Product (GDP), the value of goods and services produced in the province, rose 6.5 percent to a level of $20.3 billion in 1987, according to preliminary figures released by the Manitoba Bureau of Statistics. After allowing for price increases, this represented a gain of 3.1 percent in real GDP. Higher export demand was the primary source of growth in 1987.

In real terms, domestic demand (personal, government and investment expenditures) grew only 0.8 percent in 1987. This was the result of only marginal growth of 2.1 and 1.3 percent in government expenditures and personal expenditure respectively and a decline in real investment of 2.1 percent. Strong export growth of 7.4 percent, with no increase in the level of imports, resulted in the merchandise trade balance being the major impetus for the 3.1 percent real growth in GDP. Deflation in the value of exports, primarily the result of falling grain prices, did not allow the rise in the volume of exports to have a similar impact on Manitoba's nominal GDP rate of growth in 1987.

In nominal terms, GDP rose by 6.5 percent. The components of income which were the major contributors to growth were subsidies (primarily agricultural subsidies) which rose 52.9 percent, corporate profits which grew by 15.9 percent, and unincorporated business income which increased by 10.1 percent. The components of demand which were the major contributors to growth were exports, which rose 8.4 percent, personal expenditures which grew 5.6 percent, and government current expenditure which increased 5.5 percent.

On an industry basis, growth was led by the goods producing industries which, led by a recovery in the agriculture and mining industries (both of which declined in 1986), grew by 9.6 percent. Commercial services and non-commercial service industries rose by 7.3 and 6.4 percent respectively.

Personal Income rose by 7.4 percent to a level of $18.1 billion. Personal Disposable Income (after taxes are deducted) increased by 6.8 percent. After allowing for the increase in consumer prices (as measured by the CPI) this represented a growth in consumer purchasing power in Personal Income and Personal Disposable Income of 3.1 and 2.5 percent respectively.
